c. Natl. Acad. Sci. U.S.A. 97:9156-9161(2000).

c. NCCTION: Receptor for TNFSF13B/BLyS/BAFF and TNFSF13/APRIL.

Promotes B-cell survival and plays a role in the regulation

humoral immunity. Activates NF-kappa-B and JNK.

SUBUNIT: Associates with TRAF1, TRAF2, TRAF3, TRAF5 and TRAF

                                                                                                                                                                                                                                                                            Promotes the survival of mature B-cells and the B-cell response.

Promotes the survival of mature B-cells and the B-cell response.

Promotes the survival of mature B-cells and the B-cell response.

Promotes the survival of mature B-cells and the B-cell response.

ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; are produced by alternative splicing.

TISSUE SPECIFICITY: Highly expressed in spleen and testis; detected at lower levels in lung and thymus.

POISEASE: Defects in TWNFRSF13C are a cause of severe B-cell deficiency. B-cell deficient strain A/WySnJ has a 4.7 kb insertion in the BAFFR gene leading to an altered C-terminus. The mutant RNA is not detectable. B-cell lymphopoiesis is normal, but the life span of peripheral B-cells is much reduced.

-i- FUNCTION: Receptor for TWRSF6/FASL. The adaptor molecule FADD recruits caspase-8 to the activated receptor. The resulting death-inducing signaling complex (DISC) performs caspase-8 proteolytic activation which initiates the subsequent cascade of caspases (aspartate-specific cysteine proteases) mediating apoptosis. FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T-cells, on the antigen-stimulated suicide of mature T-cells, on the content of the content of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DOMAIN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Match
                                                                                                                                                                         both (By similarity).
SUBCELLULAR LOCATION: Type I membrane protein.
DOMAIN: CONTAINS A DEATH DOMAIN INVOLVED IN THE
AND MAYBE TO OTHER CYTOSOLIC ADAPTOR PROTEINS.
SIMILARITY: CONTAINS 3 TMFR-CYS REPEATS.
SIMILARITY: CONTAINS 1 DEATH DOMAIN.
                                                                                     s SWISS-PROT entry is copyright. It is produced through a collab
ween the Swiss Institute of Bioinformatics and the EMBL outst
European Bioinformatics Institute. There are no restrictions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          taurus (Bovine).

SUBCELLULAR LOCATION: Type III membrane protein (Probable).

ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; may be produced by alternative splicing.

TISSUE SPECIFICITY: Highly expressed in spleen and lymph node, and in resting B-cells. Detected at lower levels in activated B-cells resting CD4+ T-cells, in thymus and peripheral blood leukocytes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          18
                                                                                                  FUNCTION: Involved in calclum induced regulation of ion channel and activation of the map kinase signaling pathway. May represent an important signaling intermediate between neuropeptide activated receptors or neurotransmitters that increase calcium flux and the downstream signals that regulate neuronal activity. Interacts with the SH2 domain of Grb2. May phosphorylate the voltage-gated potassium channel protein Kv1.2. Its activation is highly correlated with the stimulation of c-Jun N-terminal kinase activity (By similarity).

CATALYTIC ACTIVITY: ATP + a protein tyrosine - ADP + protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       musculus (Mouse).
 tyrosine phosphate.

SUBUNIT: Interacts with Crk-associated substrate (Cas),
Nephrocystin and GTPase regulator associated with FAK (Graf).

SUBCELLULAR LOCATION: Cytoplasmic. Interaction with Nephrocyst
Induces the membrane-association of the kinase.

PTM: Phosphorylated on tyrosines in response to various stim
that elevate the intracellular calcium concentration, as well
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GFVANQQTRTRIKGTQK------LAKSNFRDFQTLLTETPKQIDYVVEQYTNTKNKA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                by PKC activation. Recruitment by Nephrocystin to cell matrix adhesions initiates Tyr-402 phosphorylation. In monocytes, adherence to substrata is required for tyrosine phosphorylation and kinase activation. Anglotensin II, thapsigargin and L-alphalysophosphatidic acid (LPA) also induce autophosphorylation and increase kinase activity (By similarity).                                                                                                                                                                                                                                                                                                                                                                                                                                             -:- SUBUNIT: ISOSCIATA; but not isoform 2, interacts with Crk-
associated substrate (Cas), Nephrocystin and GTPase regulator
associated with FAK (Graf).
-:- SUBCELLULAR LOCATION: Cytoplasmic. Interaction with Nephrocystin
induces the membrane-association of the kinase (By similarity).
Isoform 2 localizes to focal adhesions, but not isoforms 1 and 3.
-:- ALTERNATIVE PRODUCTS: 3 isoforms; 1 (shown here), 2/PRNK and
3/PYK2s; are produced by alternative splicing.
-:- TISSUE SPECIFICITY: Isoform 1 is expressed at high levels in the
brain (hippocampus, cerebral cortex and oliactory bulb) and poorly
in the spleen and other tissues, whereas isoforms 2 and 3 are
expressed in the spleen and brain (highest in cerebellum).
-- PTM: PDSsphorylated on tyrosines in response to various stimuli
that elevate the intracellular calcium concentration, as well as
by PKC activation. Recruitment by Nephrocystin to cell matrix
adhesions initiates Tyr-402 phosphorylation (By similarity). In
monocytes, adherence to substrata is required for tyrosine
phosphorylation and kinase activation. Angiotensin II,
thapsigargin and L-alpha-lysophosphatidic acid (LPA) also induce
autophosphorylation and increase kinase activity.
-- SIMILARITY: BELONGS TO THE TYR FAMILY OF PROTEIN KINASES. FAK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STRAIN-Sprague-Dawley; TISSUE-Brain; MEDLINB-95403356; PubMed-7673154; MEDLINB-95403356; PubMed-7673154; Sasaki H., Kotani K., Sasaki T., Sasaki H., Nagura K., Ishino M., Tobioka H., Kotani K., Sasaki T., "Cloning and characterization of cell adhesion kinase beta, a nove protein-tyrosine kinase of the focal adhesion kinase subfamily."; J.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Lyrosine phosphate.

SUBUNIT: Interacts with Crk-associated substrate (Cas),
Nephrocystin and GTPase regulator associated with FAK (Graf).

SUBCELULAR LOCATION: Cytoplasmic. Interaction with Nephrocystin induces the membrane-association of the kinase.

ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; are produced by alternative splicing.

TISSUE SPECIFICITY: Most abundant in the brain, with highest levels in amygdala and hippocampus. Low levels in kidney. Also
                                                                                                                                                                                                                                                                                                                             expressed in spleen and lymphocytes.

PTM: Phosphorylated on tyrosines in response to various stimuli that elevate the intracellular calcium concentration, as well as by PKC activation. Recruitment by Nephrocystin to cell matrix adhesions initiates Tyr-402 phosphorylation. In monocytes, adherence to substrata is required for tyrosine phosphorylation and kinase activation. Anglotensin II, thapsigargin and L-alphalysophosphatidic acid (LPA) also induce autophosphorylation and locrease kinase activity (By similarity).

SIMILARITY: BELONGS TO THE TYR FAMILY OF PROTEIN KINASES. FAK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                downstream signals that regulate neuronal activity. Interacts the SH2 domain of Grb2. May phosphorylate the voltage-gated potassium channel protein Kv1.2. Its activation is highly correlated with the stimulation of c-Jun N-terminal kinase activity.

CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein
                                                                                                                                                                              SWISS-PROT entry is copyright. Immunol. 1:252-256(2000).

-!- FUNCTION: Receptor for TWESF13/APRIL and TNESF13B/TALL1/BAFF/BLYS
that binds both ligands with similar high affinity. Mediates
calcineurin-dependent activation of NF-AT, as well as activation
of NF-kappa-B and AP-1. Involved in the stimulation of B- and T-
cell function and the regulation of humoral immunity.

-!- SUBUNIT: Binds TRAF2, TRAF5 and TRAF6. Binds the NH2-terminal
domain of CAMIG with its C-terminus.
-!- SUBCELLULAR LOCATION: Type III membrane protein.
-!- TISSUE SPECIFICITY: Highly expressed in spleen, thymus, small
intestine and peripheral blood leukocytes. Expressed in resting B-
cells and activated T-cells, but not in resting T-cells.
-!- SIMILARITY: CONTAINS 2 TNER-CYS REPEATS.
                                                                                        DISULFID

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                191
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            127
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            12
                                                                                                                                                                                                                                                                                                                               SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: PREDOMINANTLY IN THE PISTIL AND ANTHER.
POLYMORPHISM: THERE ARE A NUMBER OF DIFFERENT S ALLELES IN
B. OLERACEA, POSSIBLY PROVIDING THE RECOGNITION SPECIFICITY.
SIMILARITY: THE EXTRACELLULAR DOMAIN IS SIMILAR TO S-LOCUS
GLYCOPROTEINS OF BRASSICA, WHILE THE INTRACELLULAR DOMAIN IS
A SER/THR-PROTEIN KINASE RELATED TO RAF KINASES.
                                                                                                                                                                                                                                 s SWISS-PROT entry is copyright. It is produced through a collaboration ween the Swiss Institute of Bioinformatics and the EMBL outstation - European Bioinformatics Institute. There are no restrictions on the by non-profit institutions as long as its content is in no way ified and this statement is not removed. Usage by and for commercial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        EXTRACELLULAR DOMAIN TRIGGERS THE PROTEIN KI CYTOPLASMIC DOMAIN.
CATALYTIC ACTIVITY: ATP + a protein - ADP +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BRAOL
